Ecap V1.0.1.4 Webcam CameraA new simple technique for measurement of arterial blood flow in lower extremity in patients with a chronic leg ulcer. The arterial blood flow is measured to determine the pressure gradient and the circulation time in order to improve the diagnosis of venous reflux. One complication of the measurements is that they are not comfortable for patients. This study evaluated a new technique to measure arterial blood flow in the lower extremity in patients with a chronic leg ulcer. The authors measured the arterial blood flow in 100 patients with a chronic leg ulcer by using the 2-compartment principle of the photoplethysmogram. A light emitting diode (LED) was placed on the dorsum of the foot. LED light intensity was measured with a thermal sensor. The arterial blood flow was measured at the ankle and foot. The mean arterial pressure (MAP) was measured with a photoplethysmograph on the dorsum of the foot and the ankle. The mean ratio of the measurement to the MAP was calculated. The mean ratio of the measurement was  $0.05 \pm 0.03$  for the ankle,  $0.04 \pm 0.02$  for the middle part of the foot, and  $0.03 \pm 0.01$  for the heel. The mean ratio of the measurements of the middle part of the foot was significantly lower than that of the ankle and the heel. The measurement of arterial blood flow in patients with a chronic leg ulcer with the 2-compartment principle of the photoplethysmogram was possible. Measurement of the arterial blood flow was performed with a light in the foot, which was comfortable for patients. Semantics of social and political concepts in the history of Spain. This paper investigates the place and value of social and political concepts in the process of reconstructing Spain's history from its earliest days. The results of an analysis of Spanish historians' use of the concept of ciudadano in the reconstruction of the national identity, and of the concept of ciudadano in the construction of the discourse of legal equality, provide evidence that the use of these concepts is closely connected to the use of key concepts in the construction of Spanish national identity. The political dominance of the Spanish monarchy and the Catholic Church is associated with the use of concepts such as royal excellency and the people's majesty. The concept of ciudadano, however, appears to signify a compromise between the monarchy and 82157476af
