Windows 10 Review: Announcing the next major version of Windows Windows 10 is coming. Today, we're taking an in-depth look at what you can expect when it releases later this year. We've been working with a developer preview of Windows 10 for the past several months, and we're ready to roll out a detailed look at what the OS will be like when it's released in 2015. Windows 10 is

the successor to Windows 8.1, the second release of Microsoft's latest operating system. It's also the first release of the company's new Windows 10 OS to be released as an update rather than a new product. That means that the final version will be delivered on PCs, smartphones, and other devices for free. Microsoft has also changed the way it makes updates. Instead of announcing a new product, the company will release a few updates that address major issues, then make smaller updates throughout the year. At launch, Microsoft has more than 20 updates planned for Windows 10, with the biggest three coming in the first half of 2015. Microsoft says that this approach will make the new OS more stable. The new Windows 10 looks more like Windows 7 than Windows 8. While Windows 8 took some cues from iOS and Android, Windows 10 will be more "Metro" focused. Its interface is split into tiles representing files, programs, and other information. The new system will have a more "Start" menu and will also be entirely touch-based, though. The most obvious change is in how the OS handles files and apps. Instead of launching programs from the desktop, Windows 10 will load apps from the start menu or the tiles on the side of the screen. Microsoft has also added "snap" features to Windows 10, letting users resize windows by dragging them to the left or right. The Windows 10 Start menu 82157476af
